

PATIENT ENGAGEMENT *IN* 2030

How can **patient engagement** contribute towards building a **new ecosystem** for drug development & therapy?

Patient engagement has become a key element in drug development during recent years and will only become more important as time goes on. At the same time, these processes are undergoing change towards a new ecosystem. By taking the lessons learned from the past, taking current initiatives and bright ideas for the future, patient engagement plays a crucial role in the future of drug development & therapy.

In Q2 2022 (exact date to be confirmed), admedicum Business for Patients will organize an event in collaboration with HollandBIO where patient representatives will set the scene and subsequently multiple stakeholder speakers will share perspectives towards solutions, improvements and opportunities for patient engagement in 2030. The different perspectives will be followed by an interactive and open 'parliamentary style' debate.

Sharing knowledge & networking

Meet up with people in person!

All necessary and mandatory COVID-19 measures will be fully implemented with special attention for attendees falling in a higher-risk category.
